- 2 1x3 Boards (Front And Back Rim Of Tray) , 17 1/4" Long
- 2 1x3 Board (Side Rims Of Tray) , 11" Long

# Directions

---

1

## Cut Your Wood

Cut your wood to specified dimensions. (Can be modified to your preferences depending on how large you want your tray to be.)

**2****Drill Pocket Holes**

Drill 3 pocket holes along each side of your project panel. I used the Kreg Jig 520PRO for this.

**3****Sand**

Sand edges smooth.

**4****Attach Your Wood**

Using 1 1/4" pocket hole screws, attach your tray sides to the project panel, ensuring that your pocket hole screws will end up on the bottom of the tray.

**5****Drill Holes for Handles**

Measure your handles to see how far apart the holes need to be. I recommend using a piece of painter's tape as a template and marking where the holes should go, then placing that on the sides of the tray and drilling through it.

**6****Paint or Stain**

Paint or stain your tray according to your preference. I used a special walnut stain for this one.

7

## Add Handles

Add your handles, and enjoy!
