

## PLYWOOD COFFEE TABLE

This DIY coffee table is made out of 3/4" plywood. This guide is meant to accompany a youtube video on the Kreg channel.

### CUT THE PLYWOOD

1. Cut a 36" square of 3/4" thick plywood
2. Locate the center and then cut a 28" diameter circle. In the video i said 30" but 28" gives a better leg taper.
3. Cut the left over piece with a circular hole into the 4 legs.
4. Measure 2" in and cut of a triangular piece to taper the legs.
5. Hand draw and cut a curve on Leg 3 then use it to trace and cut Leg 4.
6. Trim Leg 1 and 2 so that the outside edge is 1-1/2" inches from the outer table edge.
7. Glue Legs 3 and 4 together and then connect to table top with pocket holes
8. Screw Legs 1 and 2 to both the table top and to Legs 1 and 2.

Hand draw then cut with jigsaw
